Dear Associate Professor Nigel Crawford

With voluminous scientific evidence mounting globally, CMN strongly opposes Australian babies and toddlers from being vaccinated against COVID-19.

On Wednesday 19 July 2022, the federal Minister for Health, Mark Butler, and the federal CMO Paul Kelly, publicly announced that upon advice from the TGA, the regulator has granted provisional approval for the Moderna COVID-19 vaccine for babies and toddlers, the next step is for ATAGI to approve it. In addition, the Minister and the CHO insist on vaccinating babies and toddlers aged zero to four, because ‘vaccination against C19 remains the most effective way to prevent severe disease, hospitalisation and death and are the last age group to be vaccinated.’

CMN is asking ATAGI and the government to reveal the TGA’s sources and to disclose who the “experts” are that provided this advice and to also provide the scientific evidence to back this advice. It is time for a transparent, community-led, cross-industry national public debate! Despite such high double dosed vaccination numbers, the response to COVID raises several concerns.

Infection rates keep increasing, waves keep coming and the real reason for hospital staff shortages is being ignored. We ask why ATAGI, and the government are not open to discussing “the science” with doctors and medical scientists who have no conflicts of interest and why the contract with Moderna is not being publicly shared.

***Associate Professor Crawford are you aware of the Doherty Institutes 2021 report, (a government commissioned report) and their research when it comes to children and C19 vaccinations.*** The report concluded, when it comes to Covid-19, the vast majority of children represent little to no risk of death, spread, hospitalisation or acute infection. It was further reported the risk of COVID-19 death in ordinarily healthy 5–11-year-olds for example is **practically and/or statistically nil**.

A Johns Hopkins study published in July 2021 monitoring 48,000 children diagnosed with COVID-19 found a mortality rate of **zero** among children without a pre-existing medical condition.<sup>1</sup>

If the vaccines are/were safe and effective:

1. Why are large numbers of adverse injuries being downplayed and poorly characterised and compensated?
2. Are you also aware that obtaining treatment in Australia if one is damaged from the vaccine is virtually impossible?
3. Why is there immunity granted to pharmaceutical companies, again, if the vaccines are so safe and effective? and,
4. Why are the contracts (*minus the commercially sensitive medical/pharmaceutical information*) not being provided for public scrutiny, given it is the public who funds procurement process?

Participatory democracies thrive on openness and transparency, a subject of which has unfortunately been lacking over the past 2 years. Be that as it may, the community may take significant comfort from the fact that ATAGI and the new Labor Government are willing to act in line with the dictates of transparency.

CMN is contacted daily by distressed members of the public who have suffered terrible adverse injuries due to the COVID-19 vaccines, and Moderna is amongst them. Those injured have further reported that because of fear and censorship, Doctors are unable to help them with their injuries. Doctors are communicating to patients and CMN that AHPRA and HCCC are forbidding them to properly treat patients, which in turn is forcing doctors to abandon their legal obligations and fiduciary duty of providing proper informed consent and duty of care.

With the Government, tech, data, bureaucrats, and pharmaceutical companies now sitting at the centre of health care, how can we claim Australia has a best in practice health care system, when the patient is no longer heard or treated with dignity, and doctors are silenced.

Furthermore, on 13 December 2021, Dr Robert Malone, developer of the mRNA vaccine technology upon which the current COVID-19 vaccinations are based, issued an urgent alert about the dangers of injecting children with COVID-19 vaccinations.

Dr Malone warns of three fundamental concerns about injecting children with COVID-19 vaccinations:

- I. The COVID-19 vaccines can trigger fundamental changes to a child's immune system and can cause permanent damage in children's critical organs, including to their:
  - a. brain and nervous system
  - b. heart and blood vessels, including blood clots
  - c. reproductive system.

---

- II. Once the damage occurs, it is irreparable, that is:
  - a. lesions within their brain cannot be fixed
  - b. heart tissue scarring cannot be repaired
  - c. a genetically reset immune system cannot be repaired
  - d. reproductive damage could affect future generations.
  
- III. The novel mRNA vaccine delivery system has not been adequately tested and is one of the “most radical medical experiments in human history.”

In Europe, 12,519 neurological disorders have been reported in children

Age	Number Injured
0 - 1 Months	313
2 Months - 2 Years	296
3 - 11 years	1,412
12 - 17 year	10,498
Disorders include	Seizures, Guillain Barre, Functional Neurological Disorder, Bell's palsy, Tremours, Paralysis, Speech loss, Deafness and Death

Make no mistake as a result of the last two years, there is a reputational crisis and loss of confidence in public death and injury statistics, the health regulators, hospital system and the medical profession. Irrespective of the utility of the covid vaccines in older age cohorts and vulnerable groups, the following is clear;

- 1) the risk to young children from covid (the illness from the virus) is vanishingly small, so much so that the question of risk at all is contentious. Therefore, there is no utility to administering the vaccine to protect the individual young child, there is nevertheless a risk from uncommon yet very real adverse effects.
  
- 2) The covid vaccines are failing in preventing transmission, if anything, enhancing it. There is no utility in administering to the young to protect either the old or the collective of the young themselves.

We have two years of experience with COVID behind us. We have witnessed Australia’s and each countries response, successes and failures and the data shows, children have fared incredibly well during the pandemic. Now that Australia is entering the final stages of the pandemic, vaccinating babies and toddlers against C19 is unjustifiable and the risks far outweigh the very few benefits.

Finally, CMN requests the federal government and ATAGI provide the people of Australia with the reasons why the COVID-19 vaccination of children should not cease immediately given the dire warnings from the creator of the mRNA vaccine delivery system and governmental statistical results coming out of Europe and the US.

Yours sincerely  
 Covid Medical Network (CMN)
